Green Infrastructure and Green Building

Overview

The focus of this program will help plan commission, board of zoning appeals members, planners, builders, developers, local officials and decision makers, natural resource groups, government agencies, and interested public learn new and innovative strategies in the area of green infrastructure and green building. Energy, climate change, and being green are now high on the public agenda. The presenters will share some new exciting strategies in Indiana and concepts that foster energy savings, reduce water consumption, and promote a healthy environment and quality of life. Green infrastructure is an interconnected network of open space that maintains ecological processes and contributes to the health and quality of life in our communities. Green building or green design is building design that yields environmental benefits, such as savings in energy, building materials, and water consumption, or reduced waste generation.

The program will include:

- Strategies and concepts associated with green infrastructure and green building design, planning, and implementation.
- The strategies outlined will include examples at the regional level, development level, and individual site plan level in Indiana.
- An example of a development in Indiana utilizing green strategies and concepts.

Speakers

Robert McCormick, Director with Planning With POWER, Purdue University

Cliff Chapman, Conservation Director with Central Indiana Land Trust

Thomas Forman, President, Chicago Associates Planners and Architects and Board Member of Tryon Farm Institute.

Brian Neilson, Consultant, EMH&T, Indianapolis
